

Weekend project for :

- Logging
- Monitoring
- Alerting
- Detection
- Investigation

Generating EC2 spikes: (using yes > /dev/null)

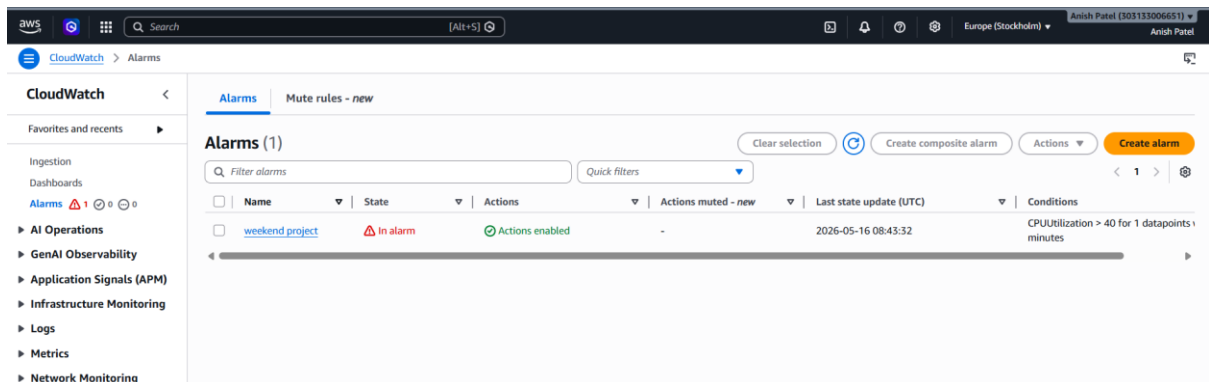

The figure is a screenshot of the AWS Management Console showing the 'Instances' page. An alarm is triggered for the instance i-0463b5f085fc08104. The alarm details are displayed in a modal window, showing the alarm name 'weekend project', the state 'ALARM', and the description 'Threshold Crossed: 1 out of the last 1 da...'. The console also shows a list of instances, including the instance i-0463b5f085fc08104, which is in the 'Running' state.

SNS on email:

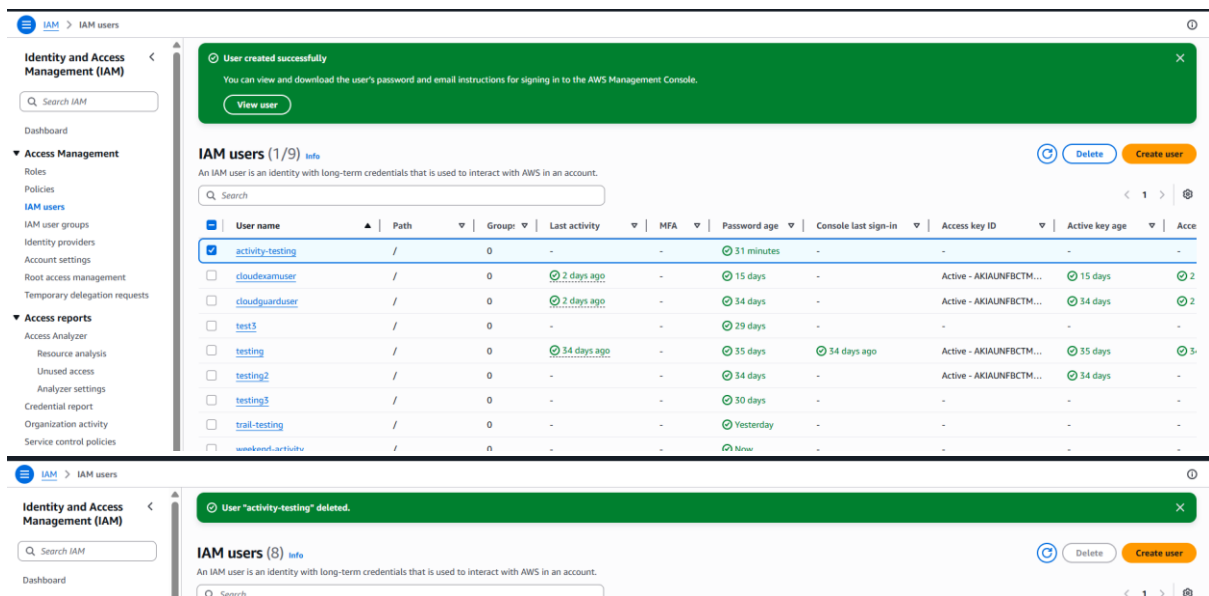

The figure is a screenshot of a Gmail inbox showing an email from 'sns-testing' (no-reply@sns.amazonaws.com) with the subject 'ALARM: "weekend project" in EU (Stockholm)'. The email content includes details about the alarm being triggered, such as the alarm name 'weekend project', the state 'ALARM', and the description 'Threshold Crossed: 1 out of the last 1 datapoint(s) [48.70980809126731 (16/05/26 08:38:00)] was greater than the threshold (40.0) (minimum 1 datapoint for OK -> ALARM transition)'. The email also provides a link to view the alarm in the AWS Management Console.

Cloudwatch alarms:

The screenshot shows the AWS CloudWatch Alarms console. On the left is a navigation menu with options like 'Alarms', 'Mute rules - new', 'Ingestion', 'Dashboards', and 'AI Operations'. The main area displays a list of alarms under the heading 'Alarms (1)'. A search bar and 'Quick filters' are at the top. The table below has columns for Name, State, Actions, Actions muted - new, Last state update (UTC), and Conditions. One alarm, 'weekend project', is listed with a state of 'In alarm' (indicated by a red triangle icon) and 'Actions enabled' (indicated by a green checkmark icon). The last state update is '2026-05-16 08:43:32' and the condition is 'CPUUtilization > 40 for 1 datapoints 1 minutes'.

IAM user creation and deletion:

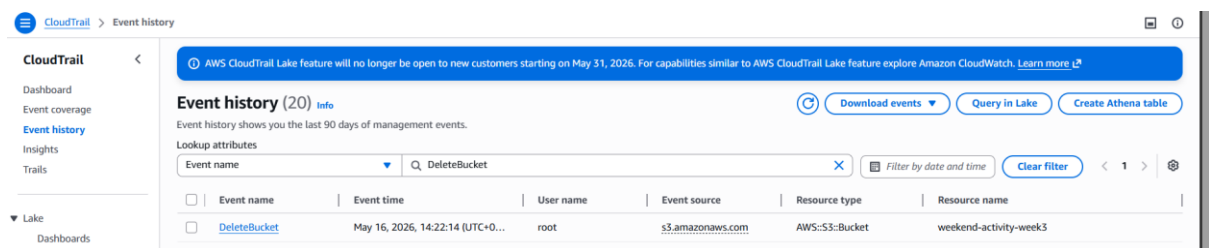

The top screenshot shows the AWS IAM console after creating a new user. A green banner at the top states 'User created successfully' with instructions to view and download the user's password and email instructions. Below this, the 'IAM users (1/9)' page is shown with a table of users. The table has columns for User name, Path, Groups, Last activity, MFA, Password age, Console last sign-in, Access key ID, Active key age, and Access key status. The user 'activity-testing' is listed with a path of '/', no groups, last activity '2 days ago', and an active key age of '15 days'. Other users listed include 'cloudexamuser', 'cloudguarduser', 'test3', 'testing', 'testing2', 'testing3', 'trail-testing', and 'awscloudtrailuser'.

The bottom screenshot shows the same IAM console after deleting the 'activity-testing' user. A green banner at the top states 'User "activity-testing" deleted.' Below this, the 'IAM users (8)' page is shown, with the 'activity-testing' user removed from the list.

- Same way create s3 bucket and delete
- Do unsuccessful login attempts on ROOT account

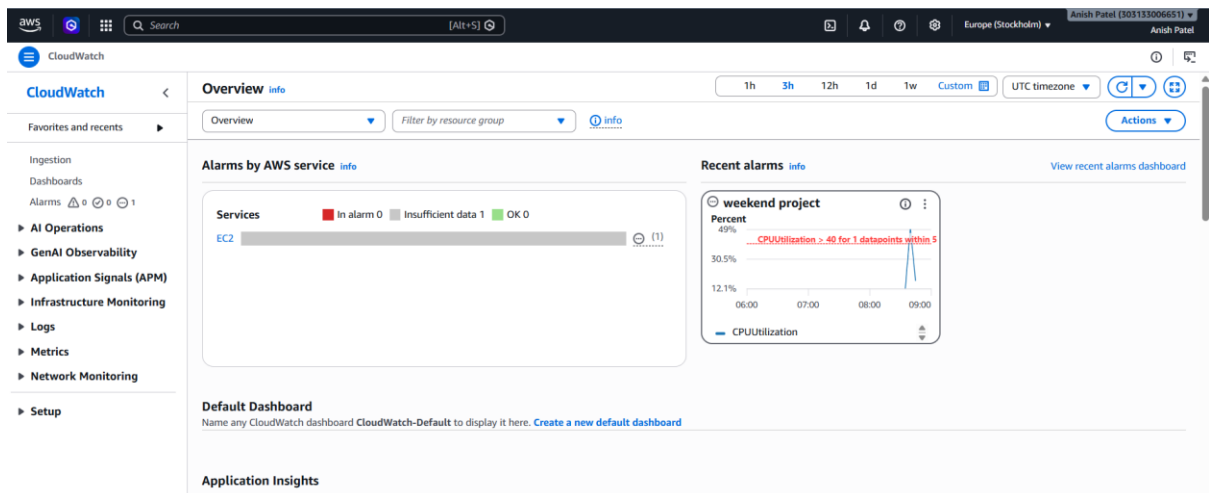

Now will check the cloud trail for investigation:

Buckets logs

The screenshot shows the AWS CloudTrail console. On the left is a navigation menu with options like 'Event history', 'Event coverage', 'Insights', and 'Trails'. The main area displays the 'Event history (20)' page. A search bar and 'Filter by date and time' are at the top. The table below has columns for Event name, Event time, User name, Event source, Resource type, and Resource name. The event 'DeleteBucket' is listed with an event time of 'May 16, 2026, 14:22:14 (UTC+0...)', user name 'root', event source 's3.amazonaws.com', resource type 'AWS::S3::Bucket', and resource name 'weekend-activity-week3'.

Cloudwatch metrics for EC2

- During setup, I encountered CloudTrail event selector and regional logging issues while attempting to capture management events such as ConsoleLogin and IAM activities. This helped me understand the importance of proper logging configuration and event selection in AWS monitoring workflows.
