

Creating cloud trail with bucket for storing logs:

The screenshot shows the 'Create trail' wizard in the AWS CloudTrail console. The breadcrumb navigation is 'CloudTrail > Dashboard > Create trail'. A progress indicator on the left shows three steps: 'Step 1: Choose trail attributes', 'Step 2: Choose log events' (current), and 'Step 3: Review and create'. The main content area is titled 'General details' and includes a link to 'Learn more'. It contains several sections: 'Trail name' with a text input 'security-learning-trail' and a character limit note; 'Storage location' with two radio buttons, 'Create new S3 bucket' (selected) and 'Use existing S3 bucket'; 'Trail log bucket and folder' with a text input 'aws-cloudtrail-logs-303133006651-3dfb4b19' and a note about log storage; 'Log file SSE-KMS encryption' with a checked 'Enabled' checkbox; 'Customer managed AWS KMS key' with 'New' selected; 'AWS KMS alias' with a text input 'Enter KMS alias'; and 'Additional settings' with 'Log file validation' checked and 'SNS notification delivery' unchecked. The footer includes links for CloudShell, Feedback, and Console Mobile App, along with copyright and policy links.

CloudTrail > Dashboard > Create trail

Step 1: Choose trail attributes
Step 2: Choose log events
Step 3: Review and create

General details

A trail created in the console is a multi-region trail. [Learn more](#)

Trail name
Enter a display name for your trail.
security-learning-trail
3-128 characters. Only letters, numbers, periods, underscores, and dashes are allowed.

☐ Enable for all accounts in my organization
To review accounts in your organization, open AWS Organizations. [See all accounts](#)

Storage location [Info](#)

☒ Create new S3 bucket
Create a bucket to store logs for the trail.

☐ Use existing S3 bucket
Choose an existing bucket to store logs for this trail.

Trail log bucket and folder
Enter a new S3 bucket name and folder (prefix) to store your logs. Bucket names must be globally unique.
aws-cloudtrail-logs-303133006651-3dfb4b19
Logs will be stored in aws-cloudtrail-logs-303133006651-3dfb4b19/AWSLogs/303133006651

Log file SSE-KMS encryption [Info](#)
☒ Enabled

Customer managed AWS KMS key
☒ New
☐ Existing

AWS KMS alias
Enter KMS alias
KMS key and S3 bucket must be in the same region.

Additional settings

Log file validation [Info](#)
☒ Enabled

SNS notification delivery [Info](#)
☐ Enabled

Now reviewing the trail for S3 event logs:

The screenshot shows the 'Review and create' step of the 'Create trail' wizard. The breadcrumb navigation is 'CloudTrail > Trails > Create trail'. The progress indicator shows 'Step 1: Choose trail attributes' (current), 'Step 2: Choose log events', and 'Step 3: Review and create'. The main content area is titled 'Review and create' and 'Step 1: Choose trail attributes'. It includes an 'Edit' button and a 'General details' section with a table of attributes: Trail name (anish-cloudtrail-training), Multi-region trail (Yes), Apply trail to my organization (Not enabled), Trail log location (anish-cloudtrail-logs-training/AWSLogs/303133006651), Log file SSE-KMS encryption (Enabled), AWS KMS key alias (training), Log file validation (Enabled), and SNS notification delivery (Disabled). Below this is a 'CloudWatch Logs' section stating 'No CloudWatch Logs log groups' and 'CloudWatch Logs is not configured for this trail'. A 'Tags' section shows 'No tags' and 'No tags associated with this trail'. The 'Step 2: Choose log events' section is partially visible, showing 'Management events' with a note: 'No additional charges apply to log management events on this trail because this is your first copy of management events.' The footer includes links for CloudShell, Feedback, and Console Mobile App, along with copyright and policy links.

CloudTrail > Trails > Create trail

Step 1: Choose trail attributes
Step 2: Choose log events
Step 3: Review and create

Review and create

Step 1: Choose trail attributes

Object management overview

The following bucket properties and object management configurations impact the behavior of this object.

Bucket properties

Bucket Versioning

When enabled, multiple variants of an object can be stored in the bucket to easily recover from unintended user actions and application failures.

Disabled

Management configurations

Replication status

When a replication rule is applied to an object the replication status indicates the progress of the operation.
